- GIT
- JAVA

🧠 PROJECTS

Spotify-Clone : A Music Streaming Application Replica -

Developed a Spotify clone project using HTML and CSS, without incorporating responsive design. This project focused on accurately replicating Spotify's visual layout and features, providing hands-on experience in front-end development and design implementation.

MarketHub : Online Shopping Destination -

"MarketHub" is an e-commerce project powered by React.js, offering dynamic user interfaces for seamless online shopping. With features like real-time search, secure payment processing, and personalized recommendations, it delivers a modern shopping experience. Leveraging React's component-based architecture, it ensures fast performance and scalability across devices, showcasing expertise in React.js development and front-end design.

Heart Disease Identification Method Using Machine Learning Classification In E-HealthCare - Pioneering Cardiovascular Risk Assessment in E-Healthcare

Utilized Python for the development of a Heart Disease Identification Method using Machine Learning Classification in E-Healthcare.

Detention Of Fake And Clone Accounts In Twitter Classification And Distance Measure Algorithms -

Enhancing Twitter Security: Detecting Fake and Clone Accounts with Advanced Classification and Distance Measure Algorithms

Developed using Python, this project focused on the Detection of Fake and Clone Accounts in Twitter through Classification and Distance Measure Algorithms
